Available immediately | Remote worldwide | Open to relocation

PROFESSIONAL SUMMARY

Lead protocol engineer with 3.5 years building Solana and EVM DeFi protocols and backend systems in Rust, Solidity and TypeScript. Former engineering lead at Adrena, owning funding, oracles, execution and governed releases. Co-founder of Diamond Pools and WhiteKnight/Fatsats, delivering contracts, services and customer applications.

PROFESSIONAL EXPERIENCE

WhiteKnight / Fatsats

Co-founder, Protocol & Backend | Aug 2026 - Present | Remote

WhiteKnight is a Solana automation protocol; Fatsats is its live operator and app for the Sat Rush mining game.

- Built the Rust/Anchor custody program, operator backend and majority of the Next.js app; enforced user-set fee ceilings, per-round spending limits and permissionless collection on-chain.
- Separated off-chain strategy from on-chain custody controls; upgraded the mainnet program while preserving account layouts and coordinated ABI, SDK and client releases.
- Built chain-based settlement and ticket recovery, operator runbooks and scheduled accounting checks; tested custody and claims with LiteSVM using Sat Rush mainnet bytecode.

Diamond Pools

Co-founder, Contracts & Backend | May 2026 - Present | Remote

Flagship ORE yield protocol on Solana, in mainnet beta; three-person founding team.

- Architected the Rust/Anchor vault program across Mining, Staking and Protocol pools: NAV-priced shares, forward-priced settlement, reserved exit liquidity and migrations of live accounts.
- Built shared-inventory accounting that retains unpaid proceeds for the original sellers through capped payouts; added exposure limits valued at current token prices and custody reconciliation to the keeper.
- Shipped an on-chain round-timing guard and per-tile duplicate latch, enabling repeated submissions without buying the same tile twice; built slot-clock/landing telemetry and coordinated the account migration and ABI/SDK changes.

Adrena

Lead Protocol Engineer | Dec 2025 - Jul 2026 | Remote

Solana perpetuals DEX; approximately $890M traded across 941 traders during tenure. Trading wound down in 2026.

- Led protocol engineering with one direct report in a five-person team, working directly with both founders, including the CTO, and coordinating delivery with the quant specialist.
- Designed and shipped the Virtual Funding Rate engine: open-interest imbalance determines payments between longs and shorts, with per-market caps and settlement across the position lifecycle.
- Built provider-consensus checks and a Rust publisher for signed price feeds (~94,000 batches/day recorded), with RPC failover inside the protocol's seven-second freshness window.
- Authored the Rust liquidation, stop-loss/take-profit and limit-order keepers; co-developed the Yellowstone gRPC executor with Jito submission and operated the venue's non-voting Solana RPC node.
- Launched five synthetic perpetual markets, gold, silver, WTI, S&P 500 and NVDA, with signed market-hours attestations and trading gates for closed underlying markets.
- Led Fidesium audit remediation: triaged 33 findings, patched 15, introduced a 48-hour admin-transfer timelock, and documented verifiable releases executed through DAO governance.

PROFESSIONAL EXPERIENCE (CONTINUED)

Autonom

Backend Engineer, Oracle & Market Data (part-time) | Mar 2026 - Jul 2026 | Remote

Signed market-data provider consumed by Adrena's oracle.

- Integrated Treasury-bill rates, VIX, Nikkei 225 and US/Hong Kong equities into the Rust price feed, including currency conversion, provider tests and signed per-feed trading windows.

Doot Foundation

Founder & Sole Engineer | Oct 2023 - Dec 2025 | Remote

Zero-knowledge price oracle on Mina and Zeko devnets; selected for Mina Foundation zkIgnite Cohort 2 funding.

- Built and operated the oracle solo for two years: 10 assets, 20+ data providers, signed aggregation on a 10-minute cadence, o1js recursive proofs and a published client SDK.
- Implemented Mina's Pallas-curve Schnorr verifier in Solidity so EVM contracts can verify Mina-signed data.
- Built the signed price-provider service for Fizk, formerly zkUSD, a separate Mina stablecoin project.

Elemental Blockchain

Smart Contract & Full-stack Engineer (contract) | Mar 2023 - Feb 2024 | Remote

EVM trading, invoicing and escrow products.

- Authored POP! Protocol's Trading and Positions contracts and trading interface, using sequencer-signed orders settled on-chain for a perpetual-positions DEX on testnet.
- Lead contributor to EBSS on Polygon: built the frontend and The Graph index, and extended escrow contracts with tokenized invoice claims.

TECHNICAL SKILLS

Protocol: Solana (SVM), Anchor, SPL tokens, PDAs/CPI, Ethereum/EVM, perpetual futures, funding rates, liquidations, vault accounting

Engineering: Rust, Solidity, TypeScript, Python, Node.js, PostgreSQL, Next.js, React, o1js

Infrastructure & security: Smart contract security, Oracles, keepers, Yellowstone gRPC, Jito, RPC operations, LiteSVM, Foundry/Hardhat, fuzz and invariant testing, audit remediation, verifiable builds, DAO governance

SELECTED PROJECTS

Casper Draw. Casper mainnet. Built lottery contracts and backend with commit-reveal randomness, payout odds and reserve/holdback accounting.

Bonding-curve launchpad. Arbitrum Sepolia, 2026. Built Solidity token-sale contracts with isolated reserves and permissionless liquidity migration to Uniswap V2; regression tests cover donation, rounding and pool-collision failures.

pErp-man. CreditCoin testnet, 2026. Primary contributor to a commodity-perpetuals DEX with UUPS-upgradeable contracts, DAO ownership handoff and a PostgreSQL-backed settlement keeper.

Elekind / Gaj Dastak. Celeron IT Solutions, co-founder. Built device software, trained thermal/YOLOv8 detection models and integrated alerts for an elephant-deterrence unit deployed with the Chhattisgarh Forest Department.

EDUCATION & TRAINING

B.Sc. Physical Sciences with Computer Science

Hansraj College, University of Delhi | 2019 - 2022 | CGPA: 8.9/10

Zero-Knowledge Bootcamp, Encode Club (Q4 2023) · zkIgnite Cohort 2, Mina Foundation (2023): Doot selected for funding
